SKILLS

CLOUD

AWS Lambda, Step Functions, SQS, SNS, EventBridge, Terraform, Docker

AI AND LLM

Generative AI, AI agents, Agentic workflows, RAG, MCP, Amazon Bedrock, LangGraph, LangChain, Claude, OpenAI, Gemini, vLLM, Pydantic, Guardrails, Model evaluation, LangSmith, Codex

INTEGRATION

REST APIs, Webhooks, OAuth, OIDC, Microsoft Graph API, Postman, Swagger, HL7, DICOM

LANGUAGES

Python, SQL, C++, MongoDB, Redis, Git, Linux, ROS

WAYS OF WORKING

Agile, Scrum, Stakeholder management, Responsible AI

EDUCATION

Master of Business Administration (MBA)
Rotterdam School of Management, Erasmus University · 01/2026 – 03/2027

BEng (Honours), Engineering Product Development
Singapore University of Technology and Design · 05/2014 – 08/2017

CERTIFICATION

AWS Certified Solutions Architect – Associate
Amazon Web Services · 10/2023

PROFILE

Solutions architect with 8 years across engineering and AI, from robotics research and C++ medtech software to healthcare data integration on AWS and LLM workflow design. Took LLM and data pipelines from prototype to production, went live with customers on site and built and led a team of 3 solutions engineers. Completing an MBA at Rotterdam School of Management.

EXPERIENCE

Solutions Architect (prev. Senior Solutions Engineer) 05/2022 – 12/2025
Mesh Bio · Singapore health-tech company working with private healthcare providers

- Per-submission time improved from about 1 hour to 6-10 minutes for 30+ clinics, with an LLM pipeline built from scratch as agentic workflows (LangGraph, Claude on Bedrock, Pydantic, ChromaDB) and guardrails.
- Onboarding time improved from 3-5 days to under 1 day per new lab and clinic, by redesigning hardcoded Lambdas into a config-driven AWS pipeline handling about 10,000 records an hour.
- Turned the first overseas customer into a lighthouse account with follow-on regional projects, by recommending a headless API-based workflow and leading 3 weeks of on-site deployment.
- Designed the API that embedded Mesh Bio's platform in a CMS used by a third of Singapore's private healthcare providers, and advised customer stakeholders on integration and rollout.
- Developed prototypes, proofs of concept and MVPs, ran pilots in Indonesia, and chose a vision language model (VLM) for a medical identification pilot with a major healthcare provider.
- Promoted to Solutions Architect; built and led a team of 3 solutions engineers, hiring, coaching and supervising them.

AI Strategy Consultant (Client: Truvalu) 06/2026 – 07/2026
RSM MBA Consulting Project · Rotterdam

- Designed a 5-stage AI monitoring workflow (5-person team), projected to improve monitoring time by about 45%.
- Engineered and demoed an AI agent MVP (Gemini, Claude, Tally.so); presented AI recommendations to client leadership.

Software Engineer 09/2021 – 04/2022
Creative Medtech Solutions · Singapore

- Owned the annotation and user-interaction layer of imaging software for a HIFU cancer-ablation robot.

Research Assistant 02/2018 – 08/2021
Singapore University of Technology and Design

- Mapped 2 floors and 5 rooms in under 6 minutes with a 12+ robot system, owning locomotion code.
- Recognized 7 hand gestures to command unmanned vehicles with an ML pipeline (Python, ROS).
